## INTERNAL PIPE COATING

### AUTOMATIC GUNS AND ROTARY ATOMIZERS FOR MANUAL AND AUTOMATIC LANCES

Pipes with a diameter of 50-800 mm can be coated internally without turning the pipe using a rotary atomizer. The coating is applied while drawing the movable lance backwards out of the pipe. Pipes with a diameter of 50-100 mm require a rotary atomizer with two centering guides for the corresponding pipe diameter. For pipes with a diameter of 100-400 mm (optionally up to 800 mm), we offer a continuously adjustable centering guide. A complete rotary atomizer unit includes a regulator unit with automatic gun and all fluid and air hoses necessary for mounting it on the pump. Based on this equipment, we also offer a handheld unit for manual internal coating of pipes, bends, and elbows up to 3 mtr. long. The size and form of the rotary atomizer depend on the pipe diameter and the material to be applied

#### USES

- Internal pipe coating with automatic guns for manual or automatic spray lances
- Internal coating of in-situ pipes with robotic technology and rotary atomizer
- Rotary atomizer systems for pipes larger than 50 mm diameter
- Coating of elbows and junctions with a rotary atomizer on a hand lance
- Special spray equipment for the coating of joints on cast iron pipe (diameter: 80 – 800 mm)

**Note:**

On request, we offer separate solutions for the external coating of pipes and the internal coating of pipes with larger diameters.

Rotary atomizer wheel
